

F-WAVE® REVIA® Hand-Split Shake Synthetic Roofing Shingles

ABOUT THIS MANUAL

- This Installation Manual is for Steep-Slope residential applications of F-WAVE® REVIA® Roofing Shingles. For support with non-residential Steep-Slope Installations, or for any other questions about the installation of F-WAVE® REVIA® Roofing Shingles, please call FWAVE Technical Support at 888-GO-FWAVE (888-463-9283).
- To obtain a Spanish-language version of this Installation Manual for Steep-Slope Residential Installations, please visit fwaverroofing.com or call FWAVE Technical Support at 888-GO-FWAVE (888-463-9283).
- ***Para obtener una versión en Español de este Manual Para Instalaciones Residenciales De Pendiente Pronunciada por favor visite fwaverroofing.com o llame al soporte técnico de FWAVE en el 888-463-9283.***

PURPOSE OF INSTRUCTIONS

- These installation instructions are intended to be a general guide for experienced roofing professionals to use when installing F-WAVE® REVIA® Roofing Shingles.
 - Although F-WAVE® REVIA® Roofing Shingles are different from traditional asphalt shingles in terms of design and materials, the installation methods are similar in many aspects.
 - This manual specifically addresses the application of general roofing practices to the installation of F-WAVE® REVIA® Roofing Shingles. Not every general roofing practice or detail an installer may encounter on a shingle installation is included in this manual.
- Before installation, the installer must ensure adherence to all applicable state and local building codes.**

NOTE: FWAVE shingles must be installed according to FWAVE application instructions and requirements by a roofing professional. FWAVE assumes no responsibility for leaks and other defects that result from failure to properly prepare the surface to which the shingles are applied, or from improper or poor application — this includes the required use of smooth, flat roof decks in good condition, the required use of a synthetic roofing underlayment, the required use of only approved sealants or adhesives, and the requirement for the installer to provide proper attic ventilation in accordance with standard minimum requirements. Installer is responsible for reviewing all applicable building codes and property standards and requirements before installation. Installation instructions are printed on the inside of each REVIA® Shingle wrapper and are available at fwaverroofing.com.

General Installation

Any significant differences between the installation of traditional asphalt shingles and F-WAVE® REVIA® Roofing Shingles are set forth in this manual. Installers should carefully read and understand each section of this manual. When installing F-WAVE® REVIA® Roofing Shingles always be sure to consult your local building codes and regulations, minimum property standards, and follow all applicable requirements. Additional information, including requirements for a FORTIFIED Home™, is available at fwaverroofing.com/resources.

SAFETY

- FALL PROTECTION EQUIPMENT MAY BE REQUIRED AND IS ALWAYS ADVISABLE.
- ALL ROOFING AND RELATED ACTIVITIES SHOULD ALWAYS BE COMPLETED WITH SAFETY IN MIND. ALL GOOD AND PROVEN SAFETY PRACTICES SHOULD BE FOLLOWED.
- ROOFING ACTIVITY CAN BE DANGEROUS. ALL NECESSARY PRECAUTIONS AND SAFETY GUIDELINES MUST BE FOLLOWED IN ACCORDANCE WITH PROPER ROOFING TRADE PRACTICES AND REGULATIONS, OSHA REQUIREMENTS AND LOCAL BUILDING CODES.

ROOF DECK

- Select and install a roof deck adhering to local building codes, minimum property standards, and manufacturers' recommendations.
- FWAVE recommends using at least **15/32" (12mm) thick plywood** or at least **7/16" (11mm) thick OSB** decking.
- ***Roof decks must be well seasoned, well supported, properly attached, and provide a SMOOTH, FLAT, nailable surface for installing shingles. Ensure roof deck and other roofing materials are dry before installing shingles.***

UNDERLAYMENT

- Select and install underlayment adhering to local building codes, manufacturers' published installation requirements, and FWAVE's requirements.
- ASTM E108 & UL790 installations:
 - For a **Class A** Roof Assembly, FWAVE requires a **double layer** of **GAF Tiger Paw** underlayment installed according to manufacturer's requirements. Always make sure the roof design and installation provides for proper ventilation to help avoid high humidity, condensation, and mold growth problems. A design professional must always address the potential for moisture

entrapment, excessive moisture build-up, and condensation. Local building codes in your area should also be reviewed for ventilation requirements. See **ATTIC VENTILATION** section.

- For a **Class B** Roof Assembly, FWAVE requires a **single layer** of **synthetic underlayment** that complies with **ASTM D226, Type I** or **Type II**; **ASTM D4869, Type I** or **Type II**; or **ASTM D6757**.
- FWAVE also requires the use of smooth-surfaced, non-granulated, self-adhering **waterproofing underlayment** compliant to **ASTM D1970**. Waterproofing underlayment is recommended for flashing critical areas such as valleys, eaves, ridges, hips, pipe penetrations, dormers, slope changes, skylights, and chimneys.
- Underlayment must be applied flat and unwrinkled to the roof deck. After the application of the underlayment, shingles should be installed as soon as possible. FWAVE does not approve of radiant barrier type products as underlayment for F-WAVE® REVIA® Roofing Shingles.

ROOF REPLACEMENT

- Check with local building codes to determine whether pre-inspections or approvals are required. Determine any specific standards that must be followed as defined by relevant building codes and minimum property standards.
- The FWAVE WeatherForce® Advantage Standard Product Limited Warranty requires installation over a **FLAT, SMOOTH**, clean roof deck covered with underlayment as specified in the **UNDERLAYMENT** section. **Re-roofing over existing asphalt shingles or other roofing materials is NOT allowed.**
- The existing structure and deck must be suitable for providing safe working conditions and the addition of the new shingles. Check that existing ventilation is adequate and will meet the minimum standards as defined in relevant building codes and minimum property standards.

ICE DAM PROTECTION

- In climates that have the potential for snow and ice there is always a possibility for the formation of ice dams at the eaves and any other uninsulated or unheated overhangs.
- In such climates, install waterproofing membrane complying with local building codes, and FWAVE's requirements.
- In such climates, FWAVE requires that waterproofing underlayment, as specified in the **UNDERLAYMENT** section, be applied at the eaves, and extend a minimum of **24" (610mm)** up the roof deck from the location of the interior side of exterior walls.

DRIP EDGE

- Install non-corroding drip edge metal adhering to local building codes and minimum property standards. FWAVE recommends using stock metal 6" (152mm) wide and at least **0.019" (0.5mm) thick**.
- **EAVES** - FWAVE recommends a **D-style drip edge** at the eaves, extending a minimum of **2" (51mm)** back from the roof edge; bending downwards over the fascia. See **Figure 1**. Apply underlayment over drip edge metal at eaves.
- **RAKES** - FWAVE recommends a **T-style modified drip edge** at rakes to cover the cut edge of the REVIA® shingles. See **Figure 2**. Apply drip edge over underlayment at the rake edges. Trim shingles flush with the T-style drip edge.

LOW-SLOPES

- **Low slopes** are defined as slopes between 2:12 and 4:12. Roof slopes are defined by the ratio of vertical rise to horizontal run. For example, 2:12 means 2 inches (51mm) vertical rise per 12 inches (305mm) horizontal run.
- For low slope applications, F-WAVE® REVIA® shingles are ornamental in regards to waterproofing. The underlayment installed becomes the primary water barrier.
- FWAVE requires the installation of either **one layer of self-adhering waterproofing underlayment**, or **two layers of synthetic underlayment** for the entirety of low slope surfaces.
- Installations on slopes below 2:12 are not allowed.

FIGURE 1 - Eaves Drip Edge

FIGURE 2 - Rake Drip Edge

FASTENING

- Select fasteners after consulting and adhering to both local building codes and FWAVE's requirements.
- FWAVE requires the use of **11- or 12-gauge** roofing nails, corrosion-resistant, with heads a minimum of **3/8" (9.5mm)** in diameter and a minimum of **1 1/4" (32mm)** long. Ring-shank nails are recommended. Nails must **penetrate 3/4" (19mm)** into the roof deck, or at least **1/8" (3.2mm) through** the roof deck for roof decks less than 3/4" (19mm) thick.
- All nails must be driven straight with heads flush to the shingle surface, never cutting into the shingle. See **Figure 3**. Fasteners must not be exposed or visible on the finished roof. Staples are not an approved fastening method.

FIGURE 3 - Fastening

FASTENER LOCATIONS

- Use **six fasteners per shingle** for ALL applications, including **STEEP SLOPES & HIGH WIND** applications.
- To ensure shingles are installed correctly, each **SHINGLE MUST BE IN POSITION AND ALIGNED BEFORE NAILING**. Do not try to adjust the shingle position once the first nail has been installed as this may cause the shingle to bow.
- Fasteners must be located **1" (25mm)** from the top of the exposure and within the F-WAVE® REVIA® Roofing Shingle Nailing Zone. Fastener locations are **1" (25mm)**, **7" (178mm)** and **15" (381mm)** from each end of the shingle as indicated on each shingle. See **Figure 4**. Fasteners must not be exposed once the installation is complete.

FIGURE 4 - Fastener Pattern

FIGURE 5 - Sealant Spots

HAND SEALING

- Cold weather may delay shingle sealing. FWAVE requires REVIA® shingles be installed at temperatures of **50°F (10°C)** and rising with a rooftop surface temperature exceeding **74°F (23°C)**.
- If shingles do not seal after 48 hours, unsealed tabs may be affixed by hand sealing, or by installing FWAVE Extreme Clips as specified in the Extreme Clip Installation technical bulletin available at fwaverroofing.com/resources.

- Hand seal shingles by applying **five 1" (25mm) diameter sized spots** of FWAVE approved sealant and adhesive (see **Table 1**). One spot behind every tab, (total of 5 spots), for the entire slope, near the bottom, as shown in **Figure 5**. Press the shingle down into position. FWAVE approved sealant and adhesive should approach the edge of the shingle, but not be exposed.
- Seal failure due to installation temperatures being below the sealant manufacturer's minimum acceptable installation temperature is not a manufacturing defect. FWAVE accepts no responsibility for losses relating to sealant failure due to installation temperatures.**
- Refer to the **STEEP SLOPES & HIGH WINDS** section for information on when hand sealing is required.

STEEP SLOPES & HIGH WINDS

- For Steep Slopes and High Wind Zones FWAVE requires that **ALL** shingle tabs are hand sealed, or affixed with FWAVE Extreme Clips, as specified in the **HAND SEALING** section. Install six fasteners per shingle as specified in the **FASTENER LOCATIONS** section.
- FWAVE defines High Winds as **131mph (211kph)** or higher. Refer to relevant local building codes and minimum property standards to determine whether your installation is in a High Wind Zone. Steep Slopes are greater than **21:12**, including **mansard roofs**. Roof slopes are defined by the ratio of vertical rise to horizontal run. For example, 21:12 means 21 inches (533mm) vertical rise per 12 inches (305mm) horizontal run.

TABLE 1 - APPROVED SEALANTS & ADHESIVES

Manufacturer	Product Name
NPC Sealants	#900 Solar Seal
R. M. Lucas Co.	#6600 Universal Terpolymer Sealant
OSI	Quad® Sealant
Mulehide	SEBS1 approved, (JTS1 NOT approved)

NOTE: Do not use asphalt-based underlayments, adhesives or sealants. These products are not compatible with F-WAVE® REVIA® Synthetic Shingles and will void the WeatherForce® Advantage Limited Product Warranty. Only use FWAVE approved sealants and adhesives as outlined in these installation instructions and in the technical bulletins at fwaveroofting.com/resources

TABLE 1 - Approved Sealants & Adhesives

ATTIC VENTILATION

- FWAVE requires that attic ventilation meets or exceeds minimum standards as defined by the relevant building codes and minimum property standards.
- Improper attic ventilation can cause moisture buildup in the attic, heat stress on the roofing materials, and ice damming. Those situations can lead to premature failure of roofing materials including the wood decking. To ensure proper attic ventilation, air must be allowed to circulate freely from attic eaves to peaks.
- As an alternative to standard attic ventilation, FWAVE does allow for an unvented conditioned attic space utilizing spray foam insulation methods.

Shingle Installation

STARTER COURSE

- FWAVE requires the use of REVIA® Starter Shingles to ensure proper waterproofing and aesthetics. See **Figure 6**.
- Cut **4" (100mm)** off the length of the first full starter shingle installed on the roof.
- If using an overhanging drip edge, (such as a D-style drip edge), align the starter's bottom edge flush with the edge of the flashing and the rake. Otherwise, the starter should overhang the eaves by 1/4 inch to 3/8 inch (6mm to 10mm).
- Fasten starter shingles with six fasteners, **1 1/2" to 3" (38 to 76mm)** up from the eave edge, and **1" (25mm)**, **7" (178mm)** and **15" (381mm)** from each end of the shingle. Continue along the eave with full length starter shingles. Do not install on rakes.

FIGURE 6 - Starter

APPLICATION PATTERN

- F-WAVE® REVIA® Roofing Shingles must be installed in a **diagonal** application pattern. The offset between courses is one full tab plus a partial tab offset. To assist with this, the alignment lines on the shingles do not extend to the end tabs.
- There are multiple ways to lay the shingles; two common methods are: the **RANDOM PATTERN** and **REPEATING PATTERN** methods. These are outlined in the following sections.
- In order to achieve the most realistic look, a random offset is preferred, as shown in **Figure 7**. A repeating offset, as shown in **Figure 8**, is also acceptable. If a repeating pattern is used, it is possible that the tab cutouts could line up at some angles when viewed from the ground. For the best appearance, the method used should be consistent on all slopes.
- Irrespective of the method used, trim shingles flush with the rake edge. See **Figure 8**.

RANDOM PATTERN

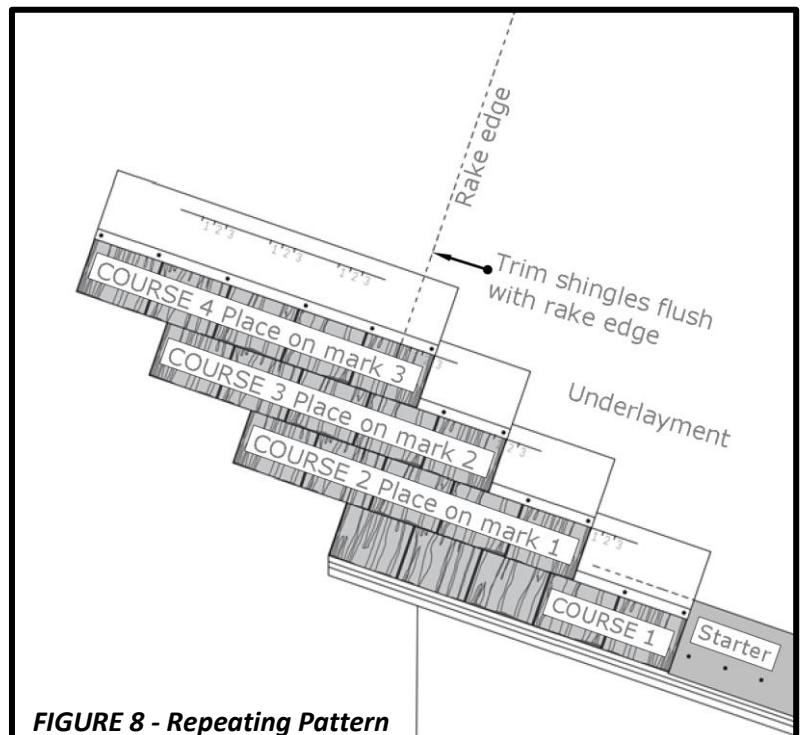

- COURSE 1** - Apply a full shingle flush with the starter course at the lower left-hand corner of the roof and secure with fasteners. Note: shingles may also be installed from the right-hand corner using the same offset patterns. Continue to apply full shingles across the roof for the first course.
- COURSE 2** - Place shingles in a diagonal offset pattern. Use the horizontal reference lines on the shingle to provide a random offset distance. Be sure to keep the edge of the shingle at least **1 1/2" (38mm)** from the cutout on the shingle below. See **Figure 7**.
- FURTHER COURSES** – Continue up the roof. While installing multiple courses in a diagonal application pattern, watch that they are not repeating.

REPEATING PATTERN

- Establish the overall diagonal method or stair-step effect. See **Figure 8**. Ensure proper placement of shingles on the alignment lines. See **Figure 9**.
- COURSE 1** - Full shingle
- COURSE 2** - Skip the first tab and place the shingle on alignment line number 1.
- COURSE 3** - Skip the first tab of the 2nd course and place the shingle on alignment line number 2.
- COURSE 4** - Skip the first tab of the previous course and place the shingle on alignment line number 3.
- COURSE 5 AND FURTHER** - Repeat steps 2 through 4, always having a 1-tab setback and placing the shingles on the 1, 2 and 3 sequentially.

GENERAL ADVICE

- FWAVE suggests that it is good practice to apply a chalk line every **4' to 6' (1.2m to 1.8m)** up the roof surface to keep the courses straight and the exposures consistent at **6" (152mm)**. Use blue chalk only. Red chalk can leave permanent stains on the roof.
- Pieces cut from shingles along the rake can be used elsewhere on the roof as required.

SHINGLE ALIGNMENT

- When installing F-WAVE® REVIA® Roofing Shingles it is important to place the shingles accurately.
- For the **REPEATING PATTERN** method, place the edge of the shingle on the alignment line. See **Figure 9**.
- When installing shingles side by side, ensure that the edges are flush with each other, so that the course is straight. It is incorrect to misalign or overlap shingles see **Figure 10**.

Flashings

VALLEYS

- FWAVE recommends two installation methods; the **OPEN VALLEY** method and the **CLOSED VALLEY ALTERNATIVE**.
- UNDERLAYMENT** - All valley flashings should be in place before shingles are installed near the valleys. Apply a minimum **36" (915mm)** wide layer of waterproofing membrane directly to the roof deck. Fasten underlayment over the waterproofing membrane by **6" (152mm)**.
- VALLEY METAL** - Consult local building codes for width of metal valley and for allowed materials. The width should be a minimum of **12" (305mm)** on each side. FWAVE recommends the use of a W-style valley metal. See **Figure 11**. Install the metal valley on top of the underlayment and fasten **1" (25mm)** from the edges of the valley. When overlapping metal valley pieces, ensure a minimum overlap of **4" (102mm)** and seal together with FWAVE approved sealant and adhesive (see **Table 1**). Do not apply fasteners at the overlaps except on the edges.
- SHINGLES** - Trim a **1" (25mm) 45° angle cut** from the top of the shingle in the valley. See **Figure 12**. Seal valley shingles to the metal by applying two parallel **1/2" (12.7mm) diameter beads** that are 1" apart of FWAVE approved sealant and adhesive (see **Table 1**). Trim the shingles at the valley to form either an **OPEN VALLEY** or **CLOSED VALLEY ALTERNATIVE** as outlined in the following sections.

OPEN VALLEY

- FWAVE prefers the Open Valley method using a "W" style valley metal. To install an open valley, first follow the instructions outlined in the **VALLEYS** section.
- When it comes to trimming the shingles at the valley, apply a chalk line on either side of the valley. Start at **4" (102mm)** wide at the top of the valley and add **1/8" (3mm)** for every **12" (305mm)** of length of the valley. This will allow for increased water flow near the eaves of the roof.
- Trim shingles to the chalk line. See **Figure 13**.

CLOSED VALLEY ALTERNATIVE

- To produce a closed valley look, FWAVE recommends a Closed Valley Alternative method using a "W" style valley metal. **Closed valley methods such as the 'closed cut' and 'woven' methods are NOT allowed.**
- To install the Closed Valley Alternative, first follow the instructions outlined in the **VALLEYS** section.
- When trimming the shingles at the valley, trim the shingles flush with the "W" fold. See **Figure 14**.

ROOF PENETRATIONS

- Flash roof penetrations using standard roofing practices. For further details go to fwaverroofing.com.

VERTICAL WALL FLASHINGS

- Adhere to local building codes and standards when installing roof to wall flashings.
- FLASHING** - FWAVE recommends installing metal flashings wherever the roof meets a vertical wall.
- Refer to the **ROOF TO SIDEWALL** and **ROOF TO HEADWALL** sections for details.
- COUNTER FLASHING** - Install counterflashing over the top of the flashing as required. All siding or other counterflashing materials should terminate at least **2" (51mm)** above the roofing surface and overlap the metal flashing by at least **2" (51mm)**.
- SHINGLES** - When shingles overlap a metal flashing, do not fasten through the metal. Use FWAVE approved sealant and adhesive, (see **Table 1**), to adhere the shingle to the metal.

ROOF TO HEADWALLS

- Apply roof shingles up to the edge of the headwall.
- Install an apron flashing at least **5" (127mm)** up the headwall and extending at least **4" (102mm)** down the roof. Nail apron flashing to the roof deck only and seal to shingles with FWAVE approved sealant and adhesive (see **Table 1**). Do not nail the apron flashing to the wall. Instead, secure with siding material (counter flashing) over the top. Terminate counter flashing at least **2" (51mm)** above the roof and overlap the apron flashing by at least **2" (51mm)**.
- Apply second row of shingles over metal flashing on the roof surface and trim to cover just exposed metal. Use FWAVE approved sealant and adhesive, (see **Table 1**), to adhere the cut shingle to the metal apron. See **Figure 15**.

ROOF TO SIDEWALLS

- FWAVE recommends using **10" x 8" (254mm x 203mm) step flashing** metal. See **Figure 16**. Step flashing must extend at least **4" (102mm)** up the sidewall and at least **4" (102mm)** over underlapping shingles.
- Interlace step flashing with shingle courses as the shingles are applied. Fasten step flashing to the roof deck only, using two nails installed into the top overlapped region. Overlap pieces of step flashing by **2" (51mm)**.
- Use FWAVE approved sealant and adhesive (see **Table 1**) to adhere the underside of the shingle to the metal step flashing.

CHIMNEYS

- Apply underlayment up to the base of the chimney.
- Install an apron flashing on the front of the chimney. See **Figure 17** for recommended dimensions. Install step flashing along the sides. For further details see the **VERTICAL WALL FLASHINGS** section.
- Install prefabricated metal cricket flashing or field fit using roofing flashings of sufficient width to cover the cricket.
- Install sheet metal cap flashing as counter flashing over flashings such as step flashing and apron flashings. See **Figure 18**.

HIPS & RIDGES

- Install F-WAVE® REVIA® **Hand Split Shake** Hip and Ridge Shingles along the hips and ridges.
- Attach using two fasteners, a minimum of **1 3/4" (44mm)** in length. Nails must penetrate a minimum **3/4" (19mm)** into the roof deck or **1/8" (3.2mm)** through the roof deck. Install nails **1" (25mm)** from the edge of the shingle in the nailing zone indicated on each shingle. See **Figure 19**.
- Make a starter shingle by removing the exposure portion. See **Figure 20**. Install Hip and Ridge with a **7 3/4" (197mm) exposure**. At the ridge, start the hip and ridge shingles from the opposite direction of the prevailing winds. See **Figure 21**. Begin hips at the bottom of the hip. For further installation details about FWAVE Hip and Ridge, visit fwaverroofing.com.

- Where Hip & Ridge Shingles are installed over ridge vent, select ridge vent that is at least **11" (279mm)** wide. Install ridge vent according to manufacturer's instructions.

FIGURE 21 - Hip & Ridge
